

Curved Roof Rafters

Made to an exclusive design curve and shape, the Curved Roof Rafter (CRR) was developed to help overcome two of the problems faced by users of roll out awnings.

The Curved Roof Rafter is particularly effective when used in conjunction with our AntiFlap Kit, with or without the addition of walls.

- It helps prevent wind flap of the fabric It helps prevent wind flap of the fabric of the awning
- It reduces water retention in rainy conditions

Rafter retracted for travel

Fit pole end into wall bracket fixed to side of van

Extend out front telescopic section and fit spigot into hole in roller

Fitted in conjunction with AntiFlap Kit and Walls
